

Navigating Menopause:

Evidence-based strategies for women's wellbeing

At no time in history has discussion around perimenopause and menopause been so prevalent. Women are now being empowered to share their experiences, seek help and make informed decisions about their health.

Join us for our live seminar as we explore the perimenopause and menopause transition, helping you build your knowledge and confidence to have more meaningful conversations with your customers.

Every woman's experience is unique. More than 40 symptoms have been associated with perimenopause and menopause, including cycle changes, fatigue, anxiety, irritability, a reduced ability to cope with stress, hot flushes and sleeplessness.

This seminar will introduce our new herbal heroes, PeriCare and MenoEase, specifically formulated to provide life-stage and symptom-specific relief and support women's wellbeing as they navigate the perimenopause and menopause transition.

This seminar will deep dive into the science behind clinically studied herbal extracts, SRI-81™, Affron® and FenuSmart™, along with other traditionally validated herbs to help you select the best option for every customer.

Products featured include:
